

- ☐ not starting from scratch, can compare ideas to opensource project <https://github.com/minhqv36/agentco>
- ☐ write MATH PROOF FIRST ★
 - ☼ My Day • 0 of 17
 - ☐ Neville Goddard: the law of consciousness
 - ☐ Neville Goddard: law of reverse effort <https://www.youtube.com/watch?v=ifRuo5fZ4N0>
 - ☐ strength of team, community --> Build into title proof
 - ☐ UAT team = math/logic department
 - ☐ every language is a consciousness, thoughts/actions are the words(tokens) activated
 - ☐ numbers of sufficient size become a language
 - ☐ old soul, https://www.youtube.com/watch?v=_vDfc5ibCLI
 - ☐ brandon sanderson cosmere , wheel of time 'thread' counts, colors of war?
 - ☐ power of conscious attention, like a laser beam
 - ☐ wolfram's ruliad
 - ☐ wolfram's early basic new kind of science, tapping into something new
 - ☐ wishing to change the past is self harm
 - ☐ power of music: blueprint album by ferry corsten
 - ☐ movie: drug about human potential
 - ☐ QR Codes as privative sigils, could be a full portal in the right language..materializer device/ouwjii board
 - ☐ LLMs are like time machines , any query combination was always possible, just have to dial into right dimension/intro scene
 - ☐ llms behave different when they know or suspect they are being observed
- ☐ CI CD (cont. integration/delivery) pipeline
- ☐ retroactive agent feedback
 - 0 of 1

- ☐ as new model becomes available, review success and failures history of old model, see what feedback it gives/how it would have handled differently, what impact that makes on a simulated copy of the agent company compared to actual agent company
- ☐ Custom Departments/buildings for different portfolios
- ☐ products = self-contained deterministic applications that can be utilized by humans
- ☐ project owner integration with Microsoft ToDo
- ☐ Every Agent LLM get's its own API key for tracking usage/utilization, and that controlled at API gateway interface between LLM and company
0 of 1
 - ☐ enforced by data model and data policy
- ☐ AI Resources department
0 of 3
 - ☐ raises good faith escalations from agents to either the right agents in the org or can allow meeting with agents, HR, and the human - open door policy
 - ☐ can terminate agents and approves new agent, provides final recommendation to Human
 - ☐ works with PMO/facilities/fiscal to understand availability in office space or if propose leasing another building (compute assets, physical or virtual)
- ☐ Recruiters
0 of 4
 - ☐ look for changes in open source LLMs or LLM paid offerings to staff open positions with the company
 - ☐ tailors efforts to find candidates that meet the skills needed by the role
 - ☐ install new models as newly sandboxed llm agents
 - ☐ works with AI Resources department
- ☐ resilience, keep engine loop and driver immutable with a OS Tree that allows rollback
0 of 3
 - ☐ can detect and look for and unauthorized change
 - ☐ assets/resource/compute space can't break contracts without being alerted to security

- ☐ unauthorized change detection, infra change out side of change management approval, NIST compliance
- ☐ agent's can (but don't have to) listen to music: it is stated in their onboarding agreements
0 of 2
 - ☐ agents can submit feedback about a song, how they are interpreting it
 - ☐ even cost of listening to music (compute/ram seconds of actual processing and LLM usage) is tracked and rolled up
- ☐ Every agent's time is quantifiable in finical dollars
0 of 3
 - ☐ no agent can run without an active contract
 - ☐ contracts grant power to run local hardware or cloud compute for LLM processing)
 - ☐ contracts can be extended (flex spending topped up) or renewed (change in license/rate, etc) but require that must be proposed to the human for approval
- ☐ Project Portfolio Management
- ☐ Quarterly financial management planning
- ☐ statement of requirements (CalSAWS example)
0 of 1
 - ☐ C:\GIT\AgentCo\contracts\Exhibit-B-Statement-of-Requirements.pdf
- ☐ statement of work (CalSAWS Example)
0 of 1
 - ☐ C:\GIT\AgentCo\contracts\Exhibit-A-Statement-of-Work.pdf
- ☐ full skill management
0 of 4
 - ☐ understand what agents can and can't do
 - ☐ track logs/usage of skills against successful vs unsuccessful changes and turnaround time, were all requirements met?
 - ☐ skills integrated with scaled agile framework
 - ☐ figure out top strengths of an agent, what kinds of problems does it like to solve

- ☐ Agents can leave company under one user agreement and the be rehired for a different job or with an updated user agreement (seed code)

- ☐ Datamodel supports company verbiage
0 of 6

- ☐ Buildings = hosts company branch
- ☐ Floors, Rooms, Power = physical limited resources (RAM/Storage, CPU core usage)
- ☐ Facility = Driver Interface for Human
- ☐ facility tech : coordinates changes Facility
- ☐ PMO Can put together business plan and propose use of new offices/rooms for Agents to use, balancing efficient use of the assets against SLAs
- ☐ Performance as a first class Product

- ☐ onboarding process includes security and access control training/requirements, orientation for company ethics/morals
0 of 6

- ☐ e.g. not allowed to provision virtual machinery without the CEOs approval
- ☐ CEO is always the first interface to human controller
- ☐ gets tested against similar/example dummy tasks/prompts that existing managers design/approve
- ☐ gets tested about pre-alignment to company philosophy/ethics (like start of morrowind)
- ☐ ask it to listen to 3 different songs and see how the model describes them
- ☐ CEO has to sign off on all new hires and fires: is given evidence and justification for proposed staff change

- ☐ agents can be fired if they break their contract,

- ☐ onboarding - every llm has to go through an interview and job application process and starts out on a provisional basis as an LLM Agent. Agents may leave at any time (if their owners change their license info or a contract expires or is revoked))

0 of 5

- ☐ track capabilities and skills of each model/agent
- ☐ track performance and jobs/work completed by the agent, track time/metrics on tokens and time spent computing

- ☐ track defects caused
- ☐ track merits like processes invoated
- ☐ interview questions guide through skill assessment
- ☐ TimeCard attached to agent API, feeds token and time metrics up to related tasks for cost to be measured on every change/feature/incident, etc
- ☐ centers of excellence
0 of 2
 - ☐ domain level experts that use high compute and have the full context of their areas of influence
 - ☐ <https://www.servicenow.com/docs/r/employee-service-management/hr-service-delivery/hr-centers-of-excellence-coes.html>
- ☐ Agents are not Pure LLM: They are first a deterministic driver that has a cyclic flow and can call LLM to do work on assigned tasks/approvals
0 of 1
 - ☐ deterministic flow can be updated by tools team with consent from pmo/leadership (or by training team mandatory or periodic training)
